

DAC3

Gas Ducted Air Conditioning System

Product Description

In-Roof or Under-Floor, ducting is a breeze with the range of Polyaire ducting and componentry. Under-Floor ducting has the same benefits as our In-Roof system. Floor vents in decorator colours are installed with Under-Roof ducted systems, while Ceiling Outlets are recommended for In-Roof ducted applications. Polyaire Flexible Ducting is not only environmentally friendly, it is also manufactured from material that won't support fungal or bacterial growth. The use of insulated Polyaire Flexible Ducting ensures that heated air is distributed to each room at the correct temperature.
